

Nguyen Thanh Khai

Mobile Application Developer | Software Engineering Student

📞 0337-342-608 @ khainguyen3626@gmail.com 📍 Ho Chi Minh City, Vietnam

SUMMARY

Highly motivated Software Engineering student with hands-on experience in cross-platform mobile development (Flutter). Proven ability to implement Clean Architecture, design intuitive UI/UX screens, and build scalable mobile applications. Strong background in system integration, REST APIs, and solving complex technical challenges. Eager to bring my technical expertise, problem-solving skills, and product-focused mindset to Egitech's expert engineering team.

SKILLS

Flutter, Dart, REST APIs, JSON, Clean Architecture, Provider, SQLite, UI/UX Principles, Git/Docker, Object-Oriented Programming (OOP), Data Structures & Algorithms (DSA), Python, C/C++, Workflow Automation, LLM Integration (Vertex AI/Gemini), Web Scraping, English (Intermediate)

EXPERIENCE

Full-stack Developer / Co-founder

PT Valley Tech

📅 11/2025 - Present 📍 Hue City, Vietnam

- **AI & Workflow Automation:** Engineered a comprehensive automation system for YouTube and TikTok content creation, streamlining everything from niche research to media production, which improved operational efficiency and increased team productivity by 500%.
- **LLM & API Integration:** Designed and implemented automated scripting workflows by directly integrating Vertex AI (Gemini) APIs for rapid, high-quality content generation.
- **Advanced Problem Solving:** Successfully bypassed complex anti-bot mechanisms (reCAPTCHA v3 Enterprise, Cloudflare) by configuring Antidetect Browsers with dynamic proxies to manage browser fingerprints and simulate real-user environments.
- **Cross-functional Teamwork:** Collaborated closely with content creators and non-technical staff to gather requirements and continuously improve the automation workflow.
- **Product Development:** Built an intuitive desktop application using Python, allowing non-technical users to operate the automation systems independently, generating over \$1,000/month in revenue.

Lead Researcher - Biometric Recognition

Posts and Telecommunications Institute of Technology (PTIT)

📅 03/2024 - 10/2024 📍 Ho Chi Minh City, Vietnam

- **Algorithm implementation:** Researched and implemented Gabor filtering techniques for multi-directional and frequency data analysis to extract key image features.
- **Model integration:** Built and validated an integration pipeline feeding Gabor features into a Convolutional Neural Network (CNN) architecture.
- **Performance evaluation:** Evaluated model performance to optimize inference time and ensure high system security compliance.

PROJECTS

Gahabit - Gamified Habit Tracker

📅 04/2026 - Present

- **High-Performance Cross-Platform Development:** Engineered a cross-platform gamified habit-tracking application using Flutter and Dart, ensuring seamless UI performance and consistent user experience across both iOS and Android.
- **Scalable Architecture:** Implemented Clean Architecture with a feature-first modular structure and Riverpod for robust state management, facilitating decoupled logic and high scalability for future feature expansions.
- **Data Persistence & Logic:** Designed and optimized a secure local storage system using SQLite to handle complex user data, check-in history, and automated calculation of habit streaks.
- **Gamification Engine:** Developed a sophisticated Gamification Core Loop by integrating a "Virtual Pet" companion. Leveraged psychological engagement triggers and reward/penalty systems to significantly enhance user retention and long-term interaction.

EDUCATION

Bachelor of Engineering in Information Technology

Posts and Telecommunications Institute of Technology (PTIT)

📅 2022 - Present 📍 Ho Chi Minh City, Vietnam

- Certificate of Excellence in Student Scientific Research (2024)

GPA

3.43 / 4.0
